

Anti-Bird Netting Diamond Mesh

Pest/Bird Control - A Bright Idea For You

Anti-Bird Netting Diamond Mesh is the barrier covering the fruit trees and gardens.

The extruded bird netting has the diamond-shaped apertures to keep birds away from the crops without getting tangled.

Furthermore, it protects the plants from the night frosts in early spring and allows air circulation.

Anti Brid Mesh-Description

Description

Extruded Anti bird netting measured

Mesh size

Bird netting is available with diamond shaped meshes. For diamond shape netting, the "mesh size" is measured along the length of one side of the diamond and expressed in millimeters when expanded to square diamond mesh.

Weight & width of the nets

Weight of nets is normally expressed in "grams per square meter" when **expanded**. It is now widely accepted that the weight of netting is directly related to the strength and durability. Consequently, a heavier stronger net is generally more expensive than lighter varieties.

Nets material is quite different to any other material in that the square meterage varies greatly when stretched in different directions. The diagrams represent the same piece of netting shown in the expanded and stretched configurations.

Expanded configuration

This is the configuration of the net when opened out to its quoted width. When prices or weights are quoted in cents, or grams per square meter, they should refer to the area of the net when **expanded** as per the diagram below. This sample is approx 10cm wide x 12.0cm deep, i.e. **120 sq cm**

Extruded Anti bird netting

Standard specifications

Code : ABM-0540B*10m

ABM--Anti bird netting

05--Aperture 5mm*5mm

40--Width 4m

B--Black color

10m--Expanded to 4m *10m=40sqm

Code : ABM-1550G*100m

ABM--Anti bird netting

15--Aperture 15mm*15mm

50--Width 4m

G--Green color

100m--Expanded to 5m*100m=500sqm
